

PATIENT SLING COMPATIBILITY STATEMENT

Information for Using Wy'East Medical Slings with other Manufacturer's Lift Equipment

Wy'East Medical Corporation has designed and manufactured safe patient handling products since its inception in 1987. Our company is registered with the Food and Drug Administration and is subject to periodic audits by the FDA to verify our compliance with Good Manufacturing Practices. Our slings are sold through national distributors and manufacturers of patient lifting equipment and are routinely used on lift equipment that is not manufactured by Wy'East Medical.

QUALITY STANDARDS

Wy'East Medical has implemented a Total Quality Management program that guides our new product design, manufacturing processes, and ongoing quality control procedures for all the products we produce.

Every sling design has been thoroughly tested on a two point sling bar with specified safety margins to verify patient weight capacities as well as repetitive stress testing to confirm durability. During the manufacturing process, our slings are visually inspected and randomly weight tested to confirm adherence to all design specifications.

LIFT COMPATIBILITY

For over ten years Wy'East Medical has manufactured patient lift and positioning slings for use with lift devices that utilize sling bars with two or four attachment points, and that accept loop style straps.

It is important for the user to carefully review sling compatibility with the lifting equipment to ensure patient weight capacities are not exceeded and that the sling attachment interfaces appropriately with the lifting equipment.

PRODUCT LIABILITY

Wy'East Medical maintains product liability insurance on all the products we manufacture.
